Riverside Community Pharmacy - Incident report

Incident number	RCP-INC-2026-007
Date and time	27 January 2026, 16:40
Reported by	Chris Walker, pharmacy manager
Staff involved	Jordan Ellis (responsible pharmacist), one dispensing assistant

What happened

A repeat prescription for 5 mg tablets was dispensed as 50 mg tablets. Both strengths are stored next to each other on the same shelf. The bag was checked and handed out at 16:40. On 28 January the patient's carer called the pharmacy after reading the box label. The patient had not taken any of the tablets.

Immediate actions

- The correct medicine was delivered to the patient's home on 28 January at 11:15.
- The two strengths were moved to separate shelves with shelf-edge warnings.
- The incident was recorded on the pharmacy's patient safety system.
- The patient's GP practice was informed by phone and by email.

Contributing factors

The pharmacy was short of one member of staff that afternoon. The second check was done by the same pharmacist who labelled the item. The dispensing system showed a stock warning that was dismissed.

Learning and follow-up

A two-person check is now required for all look-alike, sound-alike medicines. The team will review the stock warning process at the next monthly meeting. This report was shared with the superintendent pharmacist on 30 January 2026.
