Investigation report

Case reference EPSC-2026-0142 | Registrant: Jordan Ellis (PH-204518)

1. Scope

This report covers the dispensing error of 27 January 2026 and the record keeping of the controlled drugs register at Riverside Community Pharmacy between 1 and 31 January 2026.

2. Evidence reviewed

The referral form, the pharmacy incident report (exhibit CW/02), a handwritten note by the pharmacy manager (exhibit CW/01), the controlled drugs register, the staff rota for January and the investigator's site visit notes (exhibit PS/02).

3. Dispensing error

The labelling and the final check were done by the same person. The rota shows that only two staff were on duty from 14:00 to 18:00 against a planned three. The registrant accepts the error and reported it to the manager the next morning.

4. Controlled drugs register

Three entries for January were written one to two days after the supply. The quantities and balances are correct. No stock is missing.

5. Remediation

The registrant completed a refresher course on safe dispensing on 20 February 2026 and the pharmacy introduced a two-person check for look-alike medicines.

6. Conclusion

The facts are not disputed. The panel is asked to decide whether the registrant's fitness to practise is currently impaired, taking into account the remediation described above.
